## Course Learning Objectives:

- The primary objective of this course is to provide the fundamental knowledge necessary to understand the behavior of thermal systems.
- This course provides a detailed experimental analysis, including the application and heat transfer through solids, fluids, and vacuum.
- Convection, conduction, and radiation heat transfer in one and two dimensional steady and unsteady systems are examined

|                   | systems are examined.   |  |  |
|-------------------|---|--|--|
| SI.               | Experiments   |  |  |
| No.               |   |  |  |
| PART A            |   |  |  |
| 1                 | Determination of Thermal Conductivity of a Metal Rod.   |  |  |
| 2                 | Determination of Overall Heat Transfer Coefficient of a Composite wall.                               |  |  |
| 3                 | Determination of Effectiveness on a Metallic fin.   |  |  |
| 4                 | Determination of Heat Transfer Coefficient in free Convection   |  |  |
| 5                 | Determination of Heat Transfer Coefficient in a Forced Convention                                     |  |  |
| 6                 | Determination of Emissivity of a Surface.   |  |  |
| PART B            |   |  |  |
| 7                 | Determination of Stefan Boltzmann Constant.   |  |  |
| 8                 | Determination of LMDT and Effectiveness in a Parallel Flow and Counter Flow Heat Exchangers.          |  |  |
| 9                 | Experiments on Boiling of Liquid and Condensation of Vapour.  |  |  |
| 10                | Performance Test on a Vapour Compression Refrigeration.   |  |  |
| 11                | Performance Test on a Vapour Compression Air – Conditioner.   |  |  |
| 12                | Experiment on Transient Conduction Heat Transfer.   |  |  |
| PART C (OPTIONAL) |   |  |  |
| 13                | Analysis of steady and transient heat conduction, temperature distribution of plane wall and cylinder |  |  |
|                   | using Numerical approach (ANSYS/CFD package).   |  |  |
|                   |   |  |  |
| 14                | Determination of temperature distribution along a rectangular and circular fin subjected to heat loss |  |  |
|                   | through convection using Numerical approach (ANSYS/CFD package).                                      |  |  |

## **Course Outcomes:** At the end of the course, the student will be able to:

- CO1: Determine the thermal conductivity of a metal rod and overall heat transfer coefficient of composite slahs
- CO2: Determine convective heat transfer coefficient for free and forced convection and correlate with theoretical values.
- CO3: Evaluate temperature distribution characteristics of steady and transient heat conduction through solid cylinder experimentally.
- CO4: Determine surface emissivity of a test plate and Stefan Boltzmann constant
- CO5: Estimate performance of a refrigerator and effectiveness of a fin and Double pipe heat exchanger

## **Conduct of Practical Examination:**

- 1. All laboratory experiments are to be included for practical examination.
- 2. Breakup of marks and the instructions printed on the cover page of answer script to be strictly adhered by the examiners.
- 3. Students can pick one experiment from the questions lot prepared by the examiners.
- 4. Change of experiment is allowed only once and 15% Marks allotted to the procedure part to be made

## Scheme of Examination:

One Question from Part A - 40 Marks

One Question from Part B - 40 Marks

Viva-Voce - 20 Marks

Dept. Of Machanical Engineering Alva's Institute of Engg. & Technology Mijar, MOODBIDRI - 574 225
