REPORT ON INDUSTRIAL VISIT JUNE 2023

Department of Civil Engineering

Report on Industrial Visit

Objectives:

Main aim industrial visit is to provide an exposure to students about practical working environment. They also provide students a good opportunity to gain full awareness about industrial practices. Through industrial visit students get awareness about new technologies. Technology development is a main factor, about which a students should have a good knowledge. Visiting different organization help students to build a good relationship with those organization.

Event Proceedings:

The department of Civil Engineering, AIET Moodbidri, had organized an industrial visit for the 3rd year Civil Engineering students from June 22 to June 24, 2023. The visit was organized by Santhosh K., an assistant professor of Civil Engineering. A total of 26 third-year students, along with three Faculty members, participated in the visit. The details of the visit are as follows:

Day	Date	Place of Visit
Day 01	22/06/2023	Varahi Power Plant-Hydroelectric Power Station and Saavehaklu Dam.
Day 02	23/06/2023	Linganamakki Reservoir and Dam-Hydroelectric Power Station and Jog Falls.
Day 03	24/06/2023	Belur and Halebeedu-Archaeological Places of Rich Heritage

Day 1: Varahi Underground Hydro Electric Power Plant, Hosangandi and Saavehaklu Dam

The site visit started from the college campus at 7:30 a.m. on June 22, 2022, and was accompanied by three faculty members of the Civil Engineering Department. The power plant Assistant Engineer, Mr. Rohith, initially briefed the audience on the history of the project and explained the ongoing process at the plant through a visual medium. Later, the students visited various sections of the plant, such as the inlet of water with regulator, four units of Pelton Wheel Turbine, the cooling system, the generator, and the transformer. He also explained the purpose of Varahi Dam, which is to provide water for irrigation, and that it also plays a major role in generating hydroelectric power of about 150 KW, contributing to the state's energy needs.

Afternoon session students visited Saavehaklu Dam which is built across Chakra River originated at peak of Kodachadri. Constructed back in 1980, this earthen dam stands 53m tall and also feeds the Linganamakki dam. A layer of rock is placed to avoid the destruction, it is a major source of water storage for the region. The

Purpose of this dam is to store and divert river water towards Linganamakki that is Sharavathi Power Station to Generate Electricity.

Day 2: Linganamakki Power Station, Dam and Jog Falls

The morning session of the Day 2, students were visited to Linganamakki Powerhouse. Linganamakki Dam is a major hydroelectric project located in Karnataka which is built across the Sharavathi River. Assistant engineers explained about the complete setup of Linganamakki generating station. They explained the working of turbines, role of generators and transformers in generating electricity. He also explained the single line diagram and relay setup in control rooms. Ukrainian Energy Machines was selected as the turbine supplier for the hydro power project. The company provided 2 units of Kaplan turbines, each with 28.5 MW nameplate capacities.

Outcomes: At the end of the industrial visit students were able to:-

- Understand the various stages involved in power generation.
- Know the working of various hydraulic units
- Understand the power generation and transmission systems.

Day 3: Belur and Halebeedu

The afternoon students visited to Halebeedu it was the imperial capital of the great Hoysala Empire during the 12th and 13th century and is now home to the distinguished Hoysaleswara and Kedareshwara temples. It is also famous for its sculptures and panels designed in the prominent Hoysala style.

In the third day of Morning students visited to Belur, which is situated on the banks of Yagachi River in the Hassan district. It is famous for its magnificent temple complex called the Chennakesava Temple. The town is known for its rich history and architectural beauty.

Students got know about

- The detailed and intricate carving is typical to the Hoysala temples of Karnataka and it portrays scenes from Hindu mythology as well as the contemporary culture, art forms and weaponry.
- The material used for carving is known as Soapstone (Green schist) which gives them the incredible finish. The soft version of soapstone could be shaped even using our finger nails.
- The entire temple is constructed over a star shaped platform (jagati) with symmetrical corners and a grand entrance decorated with Dwarapalakas (doorkeepers) on either sides and 42 beautiful sculptures of maidens (madanikas) in various postures around it.
- There is a 42 feet tall Gravity Pillar (Mahasthambha) in the courtyard of the temple, amazingly balanced by its own center of gravity which is an existing proof for the engineering skills of that period. Even after years of invasions and vandalism, this remains as one of the masterpieces of Indian architecture.
