Report on Awareness Program On Code of Conduct

A code of conduct is a set of rules that guide student in daily practices and interactions with each other. In the college, a code of conduct may also be referred to as a code of department ethics. A code of conduct is important in the college because it provides student with a concrete guide on how they're expected to act while in class. It demonstrates a college values and what the college expects and strives for in terms of college culture.

HOD addressing 3rd sem and 5th sem student in MBA hall

Professional engineers have a personal and professional obligation to society to act in an ethical manner. Development of ethical behaviour skills in future engineers is a key competency for engineering schools as ethical behaviour is a part of the professional identity and practice of engineers. While engineering educators have somewhat established instructional methods to teach engineering ethics, they still rely heavily on teaching ethical awareness, and pay little attention to how well ethical awareness predicts ethical behaviour. However the ability to exercise ethical judgment does not mean that students are ethically educated or likely to behave in an ethical manner. Dr.Manjunath Kottari, HOD, CSE addressed the students on Professional Ethics and code of conduct. This session was conducted on 21-11-2023 at 10:00 AM in MBA Seminar hall. Around 189 students attended the session Followed by HOD Addressed

5th sem student with this regards. Around 180 students from attended the session. HOD gave awareness about Rules and Regulation of the college and the following points were discussed.

1. Attitude toward the Behaviour: Attitudes are the degree to which an individual has a positive or negative evaluation of a particular behaviour. Positive attitudes toward the behaviour should increase an individual's intentions to perform that specific behaviour.

2. Human values: morals, values and ethics: Basic moral values and ethics were discussed with the students.

3. Individual Responsibility: The students were made aware of the individual responsibilities towards the college and self. Students should treat college properties as their own and use them with care.

4. Valuing Time: A first step in good time management is to understand the value of your time. Students are informed to punctually follow the time table. Also students are informed to attend the classes on time and never be late to attend a lecture

5. Work ethic: Some insights on work ethics that student has to understand when they start working in a Industry.

6. Ethical Awareness: Ethical decisions, particularly those faced by practicing engineers, are often complex and may involve the behaviour and intentions of others. The awareness of a breach, or potential breach, in ethics is an important antecedent to selecting the most ethical course of action. Ethical dilemmas, both real and simulated, run the gambit from clear to ambiguous. Situations where behaviour is ambiguous leave the detection of a possible ethical breach in question.

7. Civic virtue: Civic virtue is the moral underpinning of how a citizen behaves and is involved in society. It is a standard of righteous behaviour in relation to a citizens' involvement in society.
