62 responses

List two ideas or lessons that you learned during this training that you will take back to your worksite/practice.

62 responses

Machine Learning Algorithms, AI and It's future

Good basic learning process, Learning advanced features according to industrial needs

JavaScript
Springboot Framework

Python programming
Interview Preparation

Sacket programming

How to interact with industry people and how to update things regularly for personal development

Learned about react js

As a business analyst I got exposure to clients meet and business deeds, but as a technical intern I got exposure to cloud

Enhancing User-Centered Design – Leveraged Figma to create intuitive and visually appealing UI/UX designs, ensuring seamless user experiences.

Strengthening Frontend Development – Applied best practices in HTML, CSS, and SCSS to build scalable and maintainable web applications.

Implementing Responsive Web Strategies – Developed adaptive web solutions using CSS media queries and frameworks, ensuring accessibility across all devices.

Optimizing Collaboration & Version Control – Utilized Git and GitHub to streamline teamwork, maintain code integrity, and track project progress efficiently.

Machines learning algorithms, AI and its future.

Managing application data I learned how to use tools like Redux to handle data better in web apps. Weekly assessments helped me. regular assessments helped me track my progress and understand my mistakes.

The company maintain the integrity and discipline So much

Python and cloud computing

Learnt about the company products and gained knowledge about our Job role in the IT Sector along with the tech related things like API's and web portals which was very much essential for my job

Use of cloud platform sevices and use of coding in real time with help of python

Empathetic Communication and continous learning

Game development
Unity Engine

1)Problem solving 2)perseverance

Important of active listening and Value of collaborative and team approach

1) College environment made us feel uncomfortable and it made us feel unworthy after coming out of the campus I felt how good mentors are there in the industry and they make us feel comfortable. (What I learnt and will take up back to my practice is that always trust your work)

2) Internship has taught me how to actually learn something and apply it in real life ,which my college could never teach me in 4 years.

Development of project work related to cloud

Being interaction and being consistent

Using AIMS software on projects.
And SDLC which taught about the project management.

Communication Practice

1. Advanced Problem-Solving – Learned to tackle complex technical challenges using structured approaches.

2. Collaboration & Innovation – Gained experience in teamwork and interdisciplinary research for real-world applications.

We need to focus on building solutions for our clients more than coding.

Fast learning and adaptability

IBM Watson Studio and AWS

Advanced Web Design and Development (HTML, CSS, SCSS): I gained a deeper understanding of advanced HTML and CSS techniques, as well as SCSS, which will help me create more dynamic, responsive, and efficient web designs.

UI/UX Design and Wireframing (Figma, UI/UX Principles): I learned how to use Figma for designing user interfaces and creating wireframes, along with the fundamentals of UI/UX principles, which will allow me to craft more user-friendly and visually appealing websites and applications.

I don't have any ideas as such but overall teaching was good

NIL

Corporate work culture and workplace communication.
Importance of time management and meeting deadlines.

Good

Taking down notes and solving the problem

Optimizing Cloud Costs and Performance
Enhancing Security in Cloud Applications

Being consistent
Being interactive in my workplaces.

Software testing

Proper maintenance of Flow and easy to solve the issues

I learnt cloud and application development

Time management, collaboration

Daily learning and consistency

1) Effective collaboration in teams I learned the importance of clear communication and teamwork to ensure smooth project execution 2) Problem solving with a structured approach

Nil

AWS and IBM watson studio

1) Selenium Testing Tool
2) JMeter Performance Testing Tool

Self learning is good if you have interest and dont stick to a single resource

NodeJS Development
API integration and Testing

Learning new language.... Sveltekit

We should learn latest technology which helps us to do project easier and faster.
We should get updated with the latest technologies

1. Work more on practical projects
2. Consistent is important

New technology, communication skills

Component-Based Architecture for Scalable Applications .
Optimizing Performance with React Hooks and Memoization .

Real world project which helped in understanding better and more innovative solutions

1. Incremental Delivery – Large projects should be developed in smaller parts to ensure steady progress, early feedback, and adaptability.
2. Pair Programming – Two developers collaborate, improving code quality and efficiency by catching errors early and sharing knowledge.

Go backend and firebase

Improved communication skill with live Projects making with new Technologies Problem solving Techniques |

Improved Problem-Solving Strategies
Effective Communication Techniques

Optimizing automation processing
Best Practices in Error Handling

About React.js

Time management, Collaboration

IBM CLOUD

Data structures, python

Problem solving
