ABOUT JAVA COURSE

Java is a general-purpose programming language that is class-based, object-oriented, and designed to have as few implementation dependencies as possible. It is intended to let application developers write once, run anywhere meaning that compiled Java code can run on all platforms that support Java without the need for recompilation. Java applications are typically compiled to bytecode that can run on any Java virtual machine regardless of the underlying computer architecture.

Continuing with the effort of training the members, a seven days Student Training Program is organized on "Advanced Java" at AIET Moodbidri by the Department of Computer Science and Engineering.

As per the current trend, due to constant change and development in digitization, our lives are improving in all areas. To design a quality product, we need to have more efficient language in the Software Development. Some of the reasons why software testing becomes very significant and integral part in the field of information technology are as follows.

1. Platform independent
2. Security
3. Robustness.
