<ul style="list-style-type: none"> <li>• Explain system software such as assemblers, loaders, linkers and macroprocessors</li> <li>• Design and develop lexical analyzers, parsers and code generators</li> <li>• Understand lex and yacc tools for implementing different concepts of system software</li> </ul>			
<p><b>Question paper pattern:</b>  The question paper will have TEN questions.  There will be TWO questions from each module.</p>			

Each question will have questions covering all the topics under a module.  
The students will have to answer FIVE full questions, selecting ONE full question from each module.
