Conceptual Data Model Entity sets, attributes, roles, and structure examples, Specialization and Generaliza Textbook 1:Ch 1.1 to 1.8, 2.1 to 2.6, 3 RBT: L1, L2, L3 Module 2  Relational Model: Relational Model Codatabase schemas, Update operations, Relational Algebra: Unary and Binary (aggregate, grouping, etc.) Examples of Design into a Logical Design: Relation SQL: SQL data definition and data typ SQL, INSERT, DELETE, and UPDATI	y of database appa Models, Schema abase languages, and ling using Entities etural constraints, ation.  1 to 3.10  Concepts, Relational transactions, and or relational operation of Queries in relational Database Designes, specifying constens the statements in SQI	lications. Overview of Datases, and Instances. Three so d interfaces, The Database Stand Relationships: Entity Weak entity types, ER diagonal Model Constraints and related lealing with constraint violans, additional relational operated algebra. Mapping Concern using ER-to-Relational map traints in SQL, retrieval quert, Additional features of SQL.	abase chema system types, grams, tional ations. ations apping. ries in	
Languages and Architectures: Data architecture and data independence, data environment. Conceptual Data Model Entity sets, attributes, roles, and structure examples, Specialization and Generaliza Textbook 1:Ch 1.1 to 1.8, 2.1 to 2.6, 3 RBT: L1, L2, L3  Module 2  Relational Model: Relational Model Codatabase schemas, Update operations, Relational Algebra: Unary and Binary (aggregate, grouping, etc.) Examples of Design into a Logical Design: Relation SQL: SQL data definition and data typ SQL, INSERT, DELETE, and UPDATI Textbook 1: Ch4.1 to 4.5, 5.1 to 5.3, 6	y of database appa Models, Schema abase languages, and ling using Entities etural constraints, ation.  1 to 3.10  Concepts, Relational transactions, and or relational operation of Queries in relational Database Designes, specifying constens the statements in SQI	lications. Overview of Datases, and Instances. Three so d interfaces, The Database Stand Relationships: Entity Weak entity types, ER diagonal Model Constraints and related lealing with constraint violans, additional relational operated algebra. Mapping Concern using ER-to-Relational map traints in SQL, retrieval quert, Additional features of SQL.	abase chema system types, grams, tional ations. ations apping. ries in	
RBT: L1, L2, L3  Module 2  Relational Model: Relational Model C database schemas, Update operations, Relational Algebra: Unary and Binary (aggregate, grouping, etc.) Examples of Design into a Logical Design: Relation SQL: SQL data definition and data typ SQL, INSERT, DELETE, and UPDATI	y of database appa Models, Schema abase languages, and ling using Entities etural constraints, ation.  1 to 3.10  Concepts, Relational transactions, and or relational operation of Queries in relational Database Designes, specifying constens the statements in SQI	lications. Overview of Datases, and Instances. Three so d interfaces, The Database Stand Relationships: Entity Weak entity types, ER diagonal Model Constraints and related lealing with constraint violans, additional relational operated algebra. Mapping Concern using ER-to-Relational map traints in SQL, retrieval quert, Additional features of SQL.	abase chema system types, grams, tional ations. ations apping. ries in	
Languages and Architectures: Data architecture and data independence, data environment. Conceptual Data Model Entity sets, attributes, roles, and structure examples, Specialization and Generaliza Textbook 1: Ch 1.1 to 1.8, 2.1 to 2.6, 3 RBT: L1, L2, L3 Module 2  Relational Model: Relational Model Codatabase schemas, Update operations, Relational Algebra: Unary and Binary (aggregate, grouping, etc.) Examples of Design into a Logical Design: Relation SQL: SQL data definition and data typ SQL, INSERT, DELETE, and UPDATI Textbook 1: Ch4.1 to 4.5, 5.1 to 5.3, 6 RBT: L1, L2, L3  Module 3	y of database appara Models, Schema abase languages, and ling using Entities etural constraints, action.  1 to 3.10  Concepts, Relational transactions, and or relational operation of Queries in relational Database Designes, specifying constends to 6.5, 8.1; Textlements in SQI.1 to 6.5, 8.1; Textlements of the second of the	lications. Overview of Datases, and Instances. Three so d interfaces, The Database Sy and Relationships: Entity Weak entity types, ER diagonal Model Constraints and related lealing with constraint violans, additional relational operated algebra. Mapping Concernations in SQL, retrieval quest, Additional features of SQL pook 2: 3.5	abase chema system types, grams, tional ations ations apping. ries in	
Languages and Architectures: Data architecture and data independence, data environment. Conceptual Data Model Entity sets, attributes, roles, and structure examples, Specialization and Generalization and	y of database appara Models, Schema abase languages, and ling using Entities etural constraints, ation.  1 to 3.10  Concepts, Relational transactions, and or relational operation of Queries in relational Database Designes, specifying constend Estatements in SQL. 1 to 6.5, 8.1; Textleplex SQL retrieval	lications. Overview of Datases, and Instances. Three so d interfaces, The Database Stand Relationships: Entity weak entity types, ER diagonal Model Constraints and related lealing with constraint violants, additional relational operated algebra. Mapping Concern using ER-to-Relational map traints in SQL, retrieval querical, Additional features of SQL pook 2: 3.5	tional tions. ations oping. ries in the sas 10	
Languages and Architectures: Data architecture and data independence, data environment. Conceptual Data Model Entity sets, attributes, roles, and structure examples, Specialization and Generaliza Textbook 1: Ch 1.1 to 1.8, 2.1 to 2.6, 3 RBT: L1, L2, L3 Module 2  Relational Model: Relational Model Codatabase schemas, Update operations, Relational Algebra: Unary and Binary (aggregate, grouping, etc.) Examples of Design into a Logical Design: Relation SQL: SQL data definition and data typ SQL, INSERT, DELETE, and UPDATI Textbook 1: Ch4.1 to 4.5, 5.1 to 5.3, 6 RBT: L1, L2, L3  Module 3	y of database appa Models, Schema abase languages, ar ling using Entities ctural constraints, ation.  1 to 3.10  Concepts, Relational transactions, and or relational operation of Queries in relational Database Designes, specifying consecutives, s	lications. Overview of Datas, and Instances. Three so d interfaces, The Database Stand Relationships: Entity weak entity types, ER diagonal Mapping Concernal algebra. Mapping Concernal algebra. Mapping Concernations in SQL, retrieval quertaints in SQL, retrieval quertaints in SQL, retrieval quertaints in SQL, retrieval quertaints in SQL. Datas queries, Specifying constraints and relational mapping Concernations in SQL. Datas queries, Specifying constraints and settlements in SQL. Datas	abase chema system types, grams, ditional ations. ations optual oping. ries in the sas abase 10	

**SQL**: Advances Queries: More complex SQL retrieval queries, Specifying constraints as assertions and action triggers, Views in SQL, Schema change statements in SQL. **Database Application Development:** Accessing databases from applications, An introduction to JDBC, JDBC classes and interfaces, SQLJ, Stored procedures, Case study: The internet Bookshop. **Internet Applications:** The three-Tier application architecture, The presentation layer, The Middle Tier

Textbook 1: Ch7.1 to 7.4; Textbook 2: 6.1 to 6.6, 7.5 to 7.7.

**RBT: L1, L2, L3** 

## Module 4

**Normalization: Database Design Theory** – Introduction to Normalization using Functional and Multivalued Dependencies: Informal design guidelines for relation schema, Functional Dependencies, Normal Forms based on Primary Keys, Second and Third Normal Forms, Boyce-Codd Normal Form, Multivalued Dependency and Fourth Normal Form, Join Dependencies and Fifth Normal Form. **Normalization Algorithms:** Inference Rules, Equivalence, and Minimal Cover, Properties of Relational Decompositions, Algorithms for Relational Database Schema Design, Nulls, Dangling tuples, and alternate Relational

Designs, Further discussion of Multivalued dependencies and 4NF, Other dependencies and	
Normal Forms	
Textbook 1: Ch14.1 to 14.7, 15.1 to 15.6	
RBT: L1, L2, L3	
Module 5	
Transaction Processing: Introduction to Transaction Processing, Transaction and System	10
concepts, Desirable properties of Transactions, Characterizing schedules based on	
recoverability, Characterizing schedules based on Serializability, Transaction support in	
SQL. Concurrency Control in Databases: Two-phase locking techniques for Concurrency	
control, Concurrency control based on Timestamp ordering, Multiversion Concurrency	
control techniques, Validation Concurrency control techniques, Granularity of Data items and	
Multiple Granularity Locking. Introduction to Database Recovery Protocols: Recovery	
Concepts, NO-UNDO/REDO recovery based on Deferred update, Recovery techniques based	
on immediate update, Shadow paging, Database backup and recovery from catastrophic	
failures	

Textbook 1: 20.1 to 20.6, 21.1 to 21.7, 22.1 to 22.4, 22.7.

**RBT: L1, L2, L3** 

**Course Outcomes:** The student will be able to :

- Identify, analyze and define database objects, enforce integrity constraints on a database using RDBMS.
- Use Structured Query Language (SQL) for database manipulation.
- Design and build simple database systems
- Develop application to interact with databases.

## **Question Paper Pattern:**

- The question paper will have ten questions.
- Each full Question consisting of 20 marks
- There will be 2 full questions (with a maximum of four sub questions) from each module.
- Each full question will have sub questions covering all the topics under a module.
- The students will have to answer 5 full questions, selecting one full question from each module.

## **Textbooks:**

- 1. Fundamentals of Database Systems, Ramez Elmasri and Shamkant B. Navathe, 7th Edition, 2017, Pearson.
- 2. Database management systems, Ramakrishnan, and Gehrke, 3<sup>rd</sup> Edition, 2014, McGraw Hill

## **Reference Books:**

- 1. Silberschatz Korth and Sudharshan, Database System Concepts, 6<sup>th</sup> Edition, Mc-GrawHill, 2013.
- 2. Coronel, Morris, and Rob, Database Principles Fundamentals of Design, Implementation and Management, Cengage Learning 2012.
