Data Warehousing & modeling: Basic Concepts: Data Warehousing: A multitier Architecture, Data warehouse models: Enterprise warehouse, Data mart and virtual warehouse, Extraction, Transformation and loading, Data Cube: A multidimensional data model, Stars, Snowflakes and Fact constellations: Schemas for multidimensional Data models, Dimensions: The role of concept Hierarchies, Measures: Their Categorization and	Contact Lours
SEMESTER – VI  Course Code  Number of Contact Hours/Week 3:0:0  CREDITS –3  Course Learning Objectives: This course (18CS641) will enable students to:  Define multi-dimensional data models. Explain rules related to association, classification and clustering analysis. Compare and contrast between different classification and clustering algorithms  Module 1  Contact Hours  CREDITS –3  Course Learning Objectives: This course (18CS641) will enable students to:  Compare and contrast between different classification and clustering analysis. Compare and contrast between different classification and clustering algorithms  Module 1  Contact Warehousing & modeling: Basic Concepts: Data Warehousing: A multitier warehouse, Extraction, Transformation and loading, Data Cube: A multidimensional data model, Stars, Snowflakes and Fact constellations: Schemas for multidimensional Data models, Dimensions: The role of concept Hierarchies, Measures: Their Categorization and	lours

computation, Typical OLAP Operations	
Textbook 2: Ch.4.1,4.2	
RBT: L1, L2, L3	
Module 2	
Data warehouse implementation & Data mining: Efficient Data Cube computation: An 08	8
overview, Indexing OLAP Data: Bitmap index and join index, Efficient processing of OLAP	
Queries, OLAP server Architecture ROLAP versus MOLAP Versus HOLAP.: Introduction:	
What is data mining, Challenges, Data Mining Tasks, Data: Types of Data, Data Quality,	
Data Preprocessing, Measures of Similarity and Dissimilarity.	
Textbook 2: Ch.4.4	
Textbook 1: Ch.1.1,1.2,1.4, 2.1 to 2.4	
RBT: L1, L2, L3	
Module 3	
Association Analysis: Association Analysis: Problem Definition, Frequent Item set 08	8
Generation, Rule generation. Alternative Methods for Generating Frequent Item sets, FP-	
Growth Algorithm, Evaluation of Association Patterns.	
Textbook 1: Ch 6.1 to 6.7 (Excluding 6.4)	
RBT: L1, L2, L3	
Module 4	
Classification: Decision Trees Induction, Method for Comparing Classifiers, Rule Based 08	8
Classifiers, Nearest Neighbor Classifiers, Bayesian Classifiers.	
Textbook 1: Ch 4.3,4.6,5.1,5.2,5.3	
RBT: L1, L2, L3	
Module 5	
Clustering Analysis: Overview, K-Means, Agglomerative Hierarchical Clustering, 08	8
DBSCAN, Cluster Evaluation, Density-Based Clustering, Graph-Based Clustering, Scalable	
Clustering Algorithms.	
Textbook 1: Ch 8.1 to 8.5, 9.3 to 9.5	
RBT: L1, L2, L3	

**Course Outcomes:** The student will be able to :

• Identify data mining problems and implement the data warehouse

- Write association rules for a given data pattern.
- Choose between classification and clustering solution.

## **Question Paper Pattern:**

- The question paper will have ten questions.
- Each full Question consisting of 20 marks
- There will be 2 full questions (with a maximum of four sub questions) from each module.
- Each full question will have sub questions covering all the topics under a module.
- The students will have to answer 5 full questions, selecting one full question from each module.

## **Textbooks:**

- 1. Pang-Ning Tan, Michael Steinbach, Vipin Kumar: Introduction to Data Mining, Pearson, First impression, 2014.
- 2. Jiawei Han, Micheline Kamber, Jian Pei: Data Mining -Concepts and Techniques, 3<sup>rd</sup> Edition, Morgan Kaufmann Publisher, 2012.

## **Reference Books:**

- 1. Sam Anahory, Dennis Murray: Data Warehousing in the Real World, Pearson, Tenth Impression, 2012.
- 2. Michael.J.Berry, Gordon.S.Linoff: Mastering Data Mining, Wiley Edition, second edition, 2012.
