FI	LE STRUCT	URES		
[As per Choice Ba	sed Credit S	stem (CBCS) scheme		
		ic year 2016 -2017)		
	SEMESTER		1.00	
Subject Code	15IS62	IA Marks	20	
Number of Lecture Hours/Week	4	Exam Marks	80	
Total Number of Lecture Hours	50	Exam Hours	03	
C. III di mi	CREDITS -			
Course objectives: This course will e				
Explain the fundamentals of fi	le structures a	nd their management.		
Measure the performance of di	ifferent file str	uctures		
Organize different file structur	es in the mem	ory.		
Demonstrate hashing and index     Module – 1	xing technique	es.	Total Control	
Wodule – 1				aching
Introduction: File Structures: The I	T	1	Ho	ours
Introduction: File Structures: The History of File Structure Design	A Consenting	le structure Design, A	Short 10	Hours
History of File Structure Design, A Conceptual Toolkit; Fundamental File Operations: Physical Files and Logical Files, Opening Files, Closing Files,				
Reading and Writing, Seeking, Specia	Characters	The Univ Directory Stru	oturo	
Physical devices and Logical Files, Fi	ile-related He	der Files UNIX file S	vetem	
Commands; Secondary Storage and	System Softs	vare: Disks Magnetic	Tane	
Disk versus Tape; CD-ROM: Introduc	ction Physica	Organization Strength	s and	
Weaknesses; Storage as Hierarchy, A	iourney of	Ryte Buffer Manager	ment	
Input /Output in UNIX.	- Journey or	a Dyte, Bullet Wallage	ment,	
Fundamental File Structure Concepts, Managing Files of Records : Field				
and Record Organization, Using	Classes to	Manipulate Buffers I	Ising	
Inheritance for Record Buffer Class	es, Managing	Fixed Length, Fixed	Field	
Buffers, An Object-Oriented Class for	Record Files	Record Access, More	about	
Record Structures, Encapsulating Re	cord Operation	ons in a Single Class,	File	
Access and File Organization.	195			
Module – 2				
Organization of Files for Performance	rmance, Ind	exing: Data Compres	ssion, 10	Hours
Reclaiming Space in files, Internal Sorting and Binary Searching, Keysorting:			rting:	
What is an Index? A Simple Index for Entry-Sequenced File, Using Template			plate	
Classes in C++ for Object I/O, Object	ect-Oriented	support for Indexed, E	ntry-	
Sequenced Files of Data Objects, Inde	exes that are t	oo large to hold in Mer	nory,	
Indexing to provide access by Multiple	le keys, Retri	eval Using Combination	ns of	
Secondary Keys, Improving the Sec	condary Inde	x structure: Inverted	Lists,	
Selective indexes, Binding.				
Module – 3	~			
Consequential Processing and the	Sorting of	Large Files: A Mode	l for   10	Hours
Implementing Cosequential Processes,	Application	of the Model to a Ge	neral	
Ledger Program, Extension of the Mod	el to include l	Mutiway Merging, A Se	cond	
Look at Sorting in Memory, Merging as a Way of Sorting Large Files on Disk.				×
Multi-Level Indexing and B-Trees:	he invention	of B-Tree, Statement of	of the	
problem, Indexing with Binary Search	n Trees; Mul	ti-Level Indexing, B-T	rees,	
Example of Creating a B-Tree, An Ob	ject-Oriented	Representation of B-T	rees,	
B-Tree Methods; Nomenclature, Forms	u Definition (	of B-Tree Properties, W	orst-	
case Search Depth, Deletion, Merging	and Redistrib	ution, Redistribution di	uring	

insertion; B* Trees, Buffering of pages; Virtual B-Trees; Variable-length Records and keys.	
Module – 4	
Indexed Sequential File Access and Prefix B + Trees: Indexed Sequential Access, Maintaining a Sequence Set, Adding a Simple Index to the Sequence Set, The Content of the Index: Separators Instead of Keys, The Simple Prefix B+ Tree and its maintenance, Index Set Block Size, Internal Structure of Index Set Blocks: A Variable-order B- Tree, Loading a Simple Prefix B+ Trees, B-Trees, B+ Trees and Simple Prefix B+ Trees in Perspective.  Module – 5	10 Hours
<b>Hashing:</b> Introduction, A Simple Hashing Algorithm, Hashing Functions and Record Distribution, How much Extra Memory should be used?, Collision resolution by progressive overflow, Buckets, Making deletions, Other collision resolution techniques, Patterns of record access.	10 Hours
Extendible Hashing: How Extendible Hashing Works, Implementation, Deletion, Extendible Hashing Performance, Alternative Approaches.  Course outcomes: The students should be able to:	. Q.S

- Choose appropriate file structure for storage representation. Identify a suitable sorting technique to arrange the data.
- Select suitable indexing and hashing techniques for better performance to a given problem.

## Question paper pattern:

The question paper will have TEN questions.

There will be TWO questions from each module.

Each question will have questions covering all the topics under a module.

The students will have to answer FIVE full questions, selecting ONE full question from each module.

## Text Books:

1. Michael J. Folk, Bill Zoellick, Greg Riccardi: File Structures-An Object Oriented Approach with C++, 3<sup>rd</sup> Edition, Pearson Education, 1998. (Chapters 1 to 12 excluding 1.4, 1.5, 5.5, 5.6, 8.6, 8.7, 8.8)

## Reference Books:

- 1. K.R. Venugopal, K.G. Srinivas, P.M. Krishnaraj: File Structures Using C++, Tata McGraw-Hill, 2008.
- 2. Scot Robert Ladd: C++ Components and Algorithms, BPB Publications, 1993.
- 3. Raghu Ramakrishan and Johannes Gehrke: Database Management Systems, 3rd Edition, McGraw Hill, 2003.
