CENTRAL MATERIALS AND PROCESSES LABORATORY

17.10.2017

To

Dr Peter Fernandes
Principal
Alva's Institution of Engg. & Technology
Mijar, MOODBIDRI – 574 225

Sub: Request for Technical Collaboration on Academic and Research

Sir,

This has reference to your letter addressed to General Manager, Foundry & Forge Division, HAL, Bangalore on the said subject.

F&F Division manufactures forging, casting and rolled rings for their internal program. The Division also caters to external and export customers in these areas. The indigenization of the above mentioned items and metalloceramic and organic brakepads for the military program are also carried out by F&F Division. The Division is ably supported by the Quality Engineering Department and centralised materials testing laboratory.

The Division accepts orientation or in-plant training for the Engineering students to a limited extent as there are restrictions on the number of students to be considered for the training in the organisation. In this regard, you may write a letter to GM(F&F) specifying the period and number of students. As regards collaborative research, you may come up with a proposal in the area of forging and casting. It would be more appropriate if you prepare the proposal after your interaction with the Division. We will evaluate its feasibility for consideration as R&D projects.

Looking forward to hearing from *you*,

Regards,

For Hindustan Aeronautics Limited
(Bangalore Complex)

Dr R.R. Bhat
DGM(CMPL)
