**In partial fulfillment of the requirements for the degree of**

**BACHELOR OF ENGINEERING**

**In**

**CIVIL ENGINEERING**

**VISVESVARAYA TECHNOLOGICAL UNIVERSITY, BELAGAVI-590018**

**Under the Guidance of**

**Prof. ARUN KUMAR G S**

**Senior Assistant Professor**

**AIET, Mijar**

**Department of Civil Engineering**

**ALVA'S INSTITUTE OF ENGINEERING AND TECHNOLOGY**

**MOOBBIDRI-574225, KARNATAKA**

**2020-2021**

**ALVA'S INSTITUTE OF ENGINEERING TECHNOLOGY**  
**(A Unit of Alva's Education Foundation®, Moodbidri)**

**"Shobhavana", Mijar, Moodbidri - 574 225, D.K.**

**DEPARTMENT OF CIVIL ENGINEERING**

**Certificate**

Certified that the project work entitled **"Siesmic analysis and response reduction of RC multistoried building using friction dampers"** has been successfully completed by

HITESH P	4AL17CV020
KANNIKA M N	4AL17CV022
KARTHIK KAPSE	4AL17CV023
MOHAMMED NADEEM SHAIKH	4AL17CV039

The bonafide students of Department of Civil Engineering, Alvas Institute of Engineering Technology in partial fulfilment for the award of BACHELOR OF ENGINEERING in CIVIL ENGINEERING of the VISVESVARAYA TECHNOLOGICAL UNIVERSITY BELAGAVI during the year 2021. It is certified that all corrections /suggestions identified for Internal Assessment have been incorporated in the report deposited in the departmental library. The project report has been approved as it satisfied academic requirements in respect of seminar work described for the Bachelor of Engineering Degree.

## ACKNOWLEDGMENT

The satisfaction and euphoria that accompany a successful completion of any task would be incomplete without the mention of people who made it possible, success is the epitome of hard work and perseverance, but steadfast of all is encouraging guidance.

So, with gratitude I acknowledge all those whose guidance and encouragement served as beacon of light and crowned the effort with success.

I thank my project guide **Prof. Arun Kumar G S**, Senior Assistant professor Department of Civil Engineering, who has been our source of inspiration. He has been especially enthusiastic in giving his valuable guidance and critical reviews.

The selection of this project topic as well as the timely completion is mainly due to the interest and persuasion of our **HOD, Dr. H Ajith Hebbar**, Department of civil engineering.

I sincerely thank, **Dr. H G Umeshchandra**, Associate Professor and Project coordinator, Department of civil engineering who has been the constant driving force behind the completion of the project.

I thank our beloved **Principal Dr. Peter Fernandes**, for his constant help and support throughout.

Also, I thank all the teaching and non-teaching staff of Department of civil engineering for the help rendered.

## **ABSTRACT**

Damping Plays important role in design of Earthquake Resistant Structures, which reduces the response of the structure when they are subjected to lateral loads. There are many different types of dampers in use. In the present study Friction Dampers are used to evaluate the response of RC buildings. The main task of a structure is to bear the lateral loads and transfer them to the foundation. Since the lateral loads imposed on a structure are dynamic in nature, they cause vibrations in the structure. In order to have earthquake resistant structures, friction dampers have been used. Buildings with G+5, G+10 and G+20 are analyzed, with and without MFD. In the present study the software ETABS 2019 have been used. The Time history analyses the response of the RC building considered in the present study is evaluated and compared with and without MFD. It has been observed that the building MFD perform well when compare with the building without MFD.
