## ABSTRACT

Our generation relies mostly on phones to get through the day. Due to this, phones have become more of a personal assistant than a means to just communicate. Keeping this thing in mind we wanted to use the concept of a phone as a personal assistant for helping the users to cook like a master even when they don't know a thing about cooking. The system is an Android Application which provides the users with simplified recipes with real-time search which are easy to understand and easier to make and can be accessed even when the user is online with the assistance of something which they carry with them all the time and hence can access it at anyplace and anytime.

A Recipe App will be suitable for all those who want to cook but lack the knowledge to cook. This will help them to cook, by giving them the recipes of whatever they want to cook. The recipes will be there according to ranges and tastes. Users will get the written recipes along with the special tips. This app contains the section of veg and non veg food separately. The user will need to login so that their recent searches / items can be stored safe. Once they login they can search the recipes through the search option or by category.
