## ABSTRACT

Every day the number of crimes in the country is increasing at a significant rate. This alarming rate calls for some innovative ideas for increasing the security of the systems. Of all the crimes one of the most trending is the theft of Automobiles. Here we propose a Fingerprint Detection System to unlock and use the automobile. The owner of the automobile will be able to unlock his/her car only after authentication through an application on his/her phone. The data is verified every time they have to use the vehicle. The owner has an option to make multiple accounts on the application as well.
