ABSTRACT

The most common problem faced by students these days is related to Attendance. They get short of attendance because in the case of emergency, they are unable to send their leave application. Sometimes due to lack of cooperation they lose their attendance of workshops they actually attended. This technique involves getting into groups and coming up with ideas, known as brainstorming, and this is a tried and true method. This technique has many variations. Keeping these problems in our mind and brainstorming over all the possible solutions, this project generated an idea of creating an application which would solve all above stated problems. Through a vast discussion, it came up with our application. The idea breaks away from traditional thought and creates a brand new perspective. This application mainly focuses on the fair distribution of attendance among students. It provides all the related details of working days, holidays, events & workshops taking place in the college.
