ABSTRACT

A dialog-exchanging system generating a meaningful and empathetic conversation between human and a computer is called a chat-bot which processes the natural language input that can be either a speech or a textual form and gives the response in the same language and expression as of the human. Various Natural Language Processing (NLP) techniques using the python library, Natural Language Tool Kit (NLTK) these inputs of speech from users can be processed and intelligent responses from such system engine can be gained to build up a human-like interaction. The chat-bot is built with a limited dictionary but uses a great algorithm to imitate a real person. The chat-bot can be used to find you an amusing partner and help you in bad times. If the users, ask the question to the chat-bot it will give suggestion based on that question. The answers are appropriate to the user's queries, if the user find his answer to be invalid, it will give default message and will notify to admin. The algorithm used here has a intelligently built in logic and is designed to better chat with users.
