ABSTRACT

The Transport Management System is a software-based web application. This application provides us complete information about a bus travelling from a specified source and to destination. This application gives current status of reservation of particular bus. It works based on HTML, CSS, PHP and MYSQL. To provide convenient bus booking facility to customers, the database maintains the registered account for customers and provides the information about all available buses to different locations and it also provides online seat booking facilities and also support online payment mode and users can cancel their bookings through online mode. In this specifically the admin and authorized staff can access the complete database. They can manage all the information related to the bus. They can also edit, delete, and update the bus information. Any queries and complaints regarding to the services, the customer can raise the request or can contact the customer care and also solve their problems.
