ABSTRACT

The Online Library Management System is an application for assisting a librarian in Managing a book library in a university. The system would provide basic set of features To add/update members, add/update books, and manage check in specifications for the systems based on the client's statement of need. The project titled Online Library Management System is Library Management software for monitoring and controlling the transactions in a library. The project "Online Library Management System" is developed in PHP and HTML, which mainly focuses on basic operations in a library like adding new books, and updating new information, searching books and members and return books. In this project we can maintain the late fine of students who returns the issued books after the due date.
