Executive summary:

A boiler is a closed vessel in which liquid is heated. The fluid does not necessarily boil. The heated or vaporized fluid exits the boiler for use in various process or heating applications, including water heating, central heating, boiler-based power creation, cooking, and sanitation. ND Sons engineers are recognized for its capability to provide equipments to meet the unique requirements of broad range of industries. It is a company who has a turnover about 10 crores and above. The company has interests in expanding the engineering business by being the supplier of choice and creating best value for their customer.

Financial analysis is the process of evaluation of the relationship between components part of a financial statement to obtain a better understanding of firm's financial position and performance of the company. In such way the main objective of financial statement analysis is to analyze and evaluate the information contained in financial statement to judge the financial soundness, profitability and solvency of a firm. The financial statements are analyzed by financial analyst with various tools before commenting about financial health and weakness of the company.

The interpretation and analysis of statement of finance is necessary to bring out the mystery behind figures in financial statement. Financial statement analysis is the process of identifying the weakness and strengths of the company by establishing relationships between the items of balance sheet and profit and loss account. The plans that to be made in the future should be based on firm's financial strengths and weakness. Data would be collected through records that is been maintained in finance department and techniques used like Trend analysis and common size statement and ratio analysis.
