EXECUTIVE SUMMARY

The objective is to study the existing system of inventory control practices in the existing structure of industry a case and suggest improvement in inventory to minimize over stocking or under stocking by making use of certain inventory control tools and techniques such as selective control practices like ABC, XYZ and FSN analysis. Application multiple basis approach to selective inventory control as an effective tool for an efficient inventory management. By applying above stated inventory tools and techniques it is expected that substantial reduction in average inventories can be achieved and there by liberate locked up money in shape of inventory.
