Date: 7-12-2017

To whomsoever it may concern

It has come to the notice of the undersigned that, Alva's Institute of Engineering & Technology-Moodabidri is proposing a project titled 'Development of prototype ethanol sensor product based on PLD grown BiFeO₃ thin films' submitted by Dr. Jayarama A as Chief Promoter along with other promoters from Alva's Institute of Engineering & Technology-Moodabidri for financial assistance from Karnataka Council for Technological Upgradation (KCTU)

The project seems to be interesting and if the prototype alcohol sensor is developed, and the design/process of the product is provided, we are prepared to undertake the production of the same in a commercial scale. We know that this unit has a market, especially in Govt. establishments, like police force and other industrial sectors
