ABSTRACT

As we know in urban areas now a days the voting system is getting most complicated only because of the person's identity.The only have the voting card as a proof of identification.Our proposed system is online voting system,which will store the identity of the voting using android mobile application.This system will get for login using voters ID and match verify stored database.After that is generated and send to the voters registered mobile number.This is very fast and helpful technique to do the verification of voter's.This will also reduce voter's time to stand in line for voting.
